NXP

OM7814

GPS low-noise amplifier evaluation board using BGU7004

Demo board description

The BGU7004 GPS front-end evaluation board simplifies the evaluation of the BGU7004 LNA for the GPS application. Two Surface Acoustic Wave filters have been added to facilitate the evaluation of the complete GPS front-end. The board is fully assembled with the BGU7004, two identical SAW filters, the input series inductor and a decoupling capacitor. The board is supplied with two SMA connectors for input and output connection to RF test equipment. The BGU7004 can operate from a 1.5 V to 2.85 V single supply and consumes about 4.7 mA.

Features

- Two SMA connectors for input and output connection to RF test equipment
- Evaluation of the power on settling time t_{on} and the power off settling time t_{off}

Descriptive summary

Evaluation board content
BGU7004 FE evaluation board in ESD safe packing

Applications
LNA for GPS, GLONASS and Galileo in smart phones, feature phones, tablet PCs, Personal Navigation Devices, Digital Still Cameras, Digital Video Cameras, RF Front End modules, complete GPS chipset modules and theft protection (laptop, ATM).
